

an ICAS approach to UT ?

what is an ICAS approach to the future of a UT time scale?

AAT ICAS is considering QUESTION ITU-R 236/7*,** in terms of 'what is an ICAS approach to the future of a UT time scale?'

certain language in recommendation currently includes terms in the format of second, minute, hour, month, Hz. should future standards of UT more specifically encompass and integrate alternative formats such as ICAS?

ITU-R TF.460 (2002), section 3.6 already states "In addition, UT1 – UTC may be given to the same or higher precision by other means" which AAT ICAS interprets might include uses of ICAS formats.
